process for producing an unsaturated carboxylic acid using a catalyst produced by a process as recited in claim 9. While processes of producing mixed metal oxide catalyst compositions are known in the art, a process requiring vapor depositing at least one dopant metal onto the surface of a mixed metal oxide catalyst having the empirical formula $A_aD_bE_cX_dO_e$ satisfying a, b, c, d, and e (as specified in claim 9) distinguishes over the prior art of record.

As concern with claims 10 & 17, the prior art does not disclose or fairly suggest a process for producing an unsaturated nitrile using a catalyst produced by a process as recited in claim 10. While processes of producing mixed metal oxide catalyst compositions are known in the art, a process requiring vapor depositing at least one dopant metal onto the surface of a mixed metal oxide catalyst having the empirical formula $A_aD_bE_cX_dO_e$ satisfying a, b, c, d, and e (as specified in claim 10) distinguishes over the prior art of record.

As concern with claims 11-13, the prior art does not disclose or fairly suggest a process for preparing a catalyst requiring vapor depositing, one upon the other, a plurality of thin films, each thin film containing at least one of the elements A, D, E and X to form a composite of A, D, E and X.

As concern with claim 14, the prior art does not disclose or fairly suggest a process for preparing a catalyst requiring vapor depositing, one upon the other, a plurality of thin films, each thin film containing at least one of the elements Mo, V, Nb and X to form a composite of Mo, V, Nb and X.

As concern with claim 15, the prior art does not disclose or fairly

suggest a process for preparing a catalyst requiring vapor depositing, one upon the other, a plurality of thin films, each thin film containing at least one of the elements Mo, V, Te and X¹ to form a composite of Mo, V, Nb and X¹.

As concern with claim 18, the prior art does not disclose or fairly suggest a process for producing an unsaturated carboxylic acid using a catalyst produced by a process as recited in the claim, which requires vapor depositing, one upon the other, a plurality of thin films, each thin film containing at least one of the elements A, D, E and X to form a composite of A, D, E and X.

As concern with claim 19, the prior art does not disclose or fairly suggest a process for producing an unsaturated nitrile using a catalyst produced by a process as recited in the claim, which requires vapor depositing, one upon the other, a plurality of thin films, each thin film containing at least one of the elements A, D, E and X to form a composite of A, D, E and X.

There is no motivation to combine the teachings of the references together.

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."
